## PCRH Lead Kit

The PCRH can be furnished with extra flexible, insulated 2/0 AWG ( $\approx 70 \text{ mm}^2$ ) stranded copper leads either for axial connection (recommended) or for right angle connection to the 1/2" ( $\approx 12 \text{ mm}$ ) diameter bushing studs.

When axial-connected leads are furnished, a length of heat-shrink sleeve is provided to completely insulate the lead-to-bushing connection. If Axial-Connected Leads are desired, specify ACL-18, and 18" leads will be supplied. If Right-Angle Connected Leads are desired, specify RACL-18.

If alternate lengths are desired, specify the units for length "L" (e.g., inches, mm, etc.). Each PCRH requires two leads. If only one length is specified, both leads will be furnished to the same length.

Axial connected leads will be factory connected to the bushing stud and insulated for lead lengths up to 15 ft. (4.6 m). (Always minimize lead length to provide the best over-voltage protection.)
