

MEET DAIRYLAND'S NEWEST ACCESSORY:

DIRECT BURY ENCLOSURE

SSD & OVP2 MODEL AVAILABLE NOW

There are times when it may be beneficial to install a Dairyland decoupler entirely underground. Reasons may include deterring theft or vandalism, minimizing lead distance to buried isolation joints, avoiding interference with farming operations, or simply, not wanting any visible components above ground.

The Dairyland ENCL-DB series of enclosures allows for the direct burial of selected Dairyland products. These consist of a fully sealed enclosure to house the decoupler, with cables exiting the enclosure through a sealed interface. The 36-inch-long cables are supplied with unfinished ends, giving the operator the flexibility to cut to length and/or to accommodate a variety of connection types in the field.

DAIRYLAND CLASSIFICATION:
 PRODUCT ACCESSORY

DESIGNED FOR: DIRECT BURIAL OF
 DAIRYLAND SSD OR OVP2
